Please, accept the communication concerning this application (correction);

Application number 09/886,862

Filing date 11/20/2001

Applicant : Hanna Albert Awad

Title : concepts and their applications, pumps, compressors working on valves and

engines working on those compressors.

The inventions of Duthie, McClewin et al, Simpson et al, and Abousabha et al are very specific for a very specific system or device. My invention is a generalization of all systems explained in a different type of device.

The two theories expressed in my invention :

If you have two sources of temperature you can create a third source higher than the two by using the two sources.

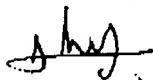

And, if you have two sources of pressure you can create a third source higher than the two by using the two sources

These two theories are a generalization for all systems and not specific for a special type of device.

The devices expressed in my invention are different from the ones expressed in the other inventions and lead to a pump and a compressor and an engine and express clearly a globalization of all systems and devices.

The other inventions are for a specific hydraulic or generation systems expressed in a very restrictive explanation of a certain combination of devices.

My invention is clearly another general device, globalizing all systems and devices.

If you may accept my invention as a different type of device and a generalization of all systems and devices for generating pressure and temperature.

The specific cases expressed in the other inventions are for very particular and different type of a combination of devices which lead to a particular outcome.

My invention lead to a pump and a compressor and an engine unlike the other inventions Which has a particular outcome for a very particular combination of devices.

The right I am claiming for is for the pump, compressor and engine which is different from a certain combination of devices which led to a particular outcome.

Sincerely,

Hanna Albert Awad
